

High efficiency meets space-saving solution

The CALYPSO VM domestic hot water heat pump from Austria Email GmbH not only offers an alternative way of heating domestic hot water for detached houses and multi-storey flats, but also saves energy costs and protects the environment.

The AE CALYPSO VM domestic hot water heat pump is characterised above all by its high efficiency and was specially designed as a space-saving solution for wall mounting. For this reason, it is particularly popular in detached houses and multi-storey flats for hot water preparation.

As an energy-efficient replacement, the product not only scores with energy savings of up to 75% compared to classic electric water heaters, but also with a short heat-up time. It guarantees a wide temperature range and offers maximum convenience in use thanks to its intelligent control system. The user-friendly digital display makes the menu easy to operate and can also be simply and easily integrated into standard smart home solutions. Thanks to the Cozy Touch app, everything can be set on the go via smartphone or tablet and the hot water comfort can be flexibly controlled from anywhere.

All information on the Austria Email product range is summarised at www.austria-email.at. All documents are also available for download.

Everything at a glance:

- Space-saving, wall-mounted solution for installation even in small rooms
- Protected against calcification by steatite dry heating element
- Maintenance-free ACI impressed current anode
- CFC-free, high-density tank insulation for greater savings
- Intelligent energy consumption control
- Smart Control adaptation to individual usage behaviour
- Easy installation with optimised wall bracket
- Fast water heating
- Compatibility with photovoltaic modules to utilise free solar energy
- Horizontal transport possible
