
Maximum comfort in the smallest of spaces with the wall-mounted Calypso VM domestic hot water heat pump from Austria Email.

CALYPSO VM is a highly efficient drinking water heat pump for wall mounting. This space-saving wall-mounted solution was designed as an energy-efficient replacement for classic electric water heaters. The wall mounting, the short heating time and the intelligent control guarantee maximum comfort.

At a glance

- Up to 75 % energy savings compared to classic electric water heaters
- ACI hybrid corrosion protection technology and ceramic dry heating element
- Great energy savings thanks to the high-performance heat pump
- Compatibility with photovoltaic modules to use free solar energy
- Horizontal transport possible
- COZY TOUCH APP: mobile comfort control

The benefits and features in detail

- Comfort

- Space-saving, wall-mounted solution
- Low-noise, therefore particularly suitable for installation in living areas
- Optimal also for small rooms, low ceilings and corners
- Fast water heating
- Intelligent control

- Quality and durability

- Diamond quality enamel
- Overpressure valve ensures safety in case of malfunction or overpressure
- Special lip seal prevents rust on the flange
- Environmentally friendly - CFC free

- Economy

- Low energy consumption thanks to the high performance heat pump (CALYPSO VM reduces energy consumption by up to 75% compared to traditional electric water heaters)
- Has a PV input and is therefore ideal for self-consumption.
- Intelligent energy consumption control

- Ease of use

- Easy installation
- Digital display with user-friendly control panel (daily programming, various auto functions and energy consumption display)
- Remote control (via mobile phone app)
