The perfect combination

A product that can be combined with all standard heat pumps and also impresses with its short heat-up time, long service life and low maintenance requirements.

Sounds too good to be true? Not with the CANDRA +300 DHW cylinder under the ACV brand. It is the convincing first choice for energy-conscious use with heat pumps.

In contrast to many other domestic hot water cylinders for heat pumps, CANDRA +300 is not only particularly lightweight, because the large heat exchange surface, which results from the use of a heat exchanger made of corrugated pipe, also ensures short heating times thanks to its high transfer capacity.

The product can be used in combination with all heat pumps from Austria Email and Group Atlantic and is perfect for heat pump systems in new builds or renovation projects. As no anode is used, CANDRA +300 impresses with its long service life and low maintenance requirements. What's more, at 75kg, it is only half the weight of comparable products.

Further information on the Austria Email product range is summarised at www.austria-email.de. All product documentation is also available for download here.

All information on the Austria Email product range is summarised at www.austria-email.at. All documents are also available for download.

Everything at a glance:

- Use in combination with all heat pumps from Austria Email and Groupe Atalntic
- Perfectly suited for heat pump systems in new builds and renovations
- Short heat-up time and particularly high heat transfer capacity thanks to heat exchanger made from corrugated pipework
- Long service life and low maintenance, as no anode is used
- Lightweight and compact at just 75kg - comparable products weigh at least twice as much
- Smaller diameter compared to conventional storage tanks
- 1 ½’ socket for screw-in heaters
- Short delivery times - available immediately
