

Electric suspended storage tank VME from Austria Email

With our electric suspended storage tank, we guarantee even more safety against corrosion through appropriate dimensioning of the magnesium protective anode and optimisation of the enamel technology.

The advantages of this storage tank

- Adjustment range visible at the front, making it easier to set the hot water temperature (energy-saving position)
- Lid with service flap for better access to the heating element
- Protective current leakage resistor for optimum corrosion protection
- Single circuit can be reconnected

For energy-efficient operation, the VME is equipped with high-quality PU thermal insulation.
