“

The WK series air/pressure water boilers are made of quality steel in accordance with EN standards and are ideally suited for use in drinking and process water networks!

”

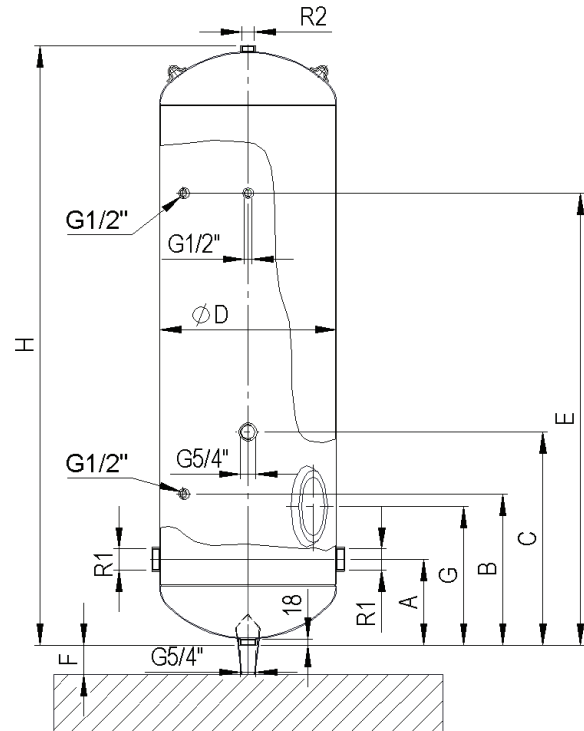

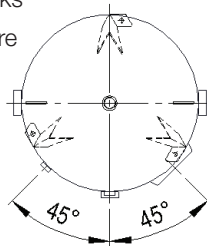

PRESSURISED WATER BOILER

The pressurised water tanks of the WK type series are made of quality steel according to EN standards and are excellently suited for use in drinking and service water networks. The tanks with a capacity of 150 to 500 litres are particularly well suited for damping pressure surges in networks or for maintaining a constant power pressure.

TECHNICAL DATA

- Operating pressure 6 bar
- Capacity: 150 L, 200 L, 300 L, 500 L
- Optimum corrosion protection due to full galvanisation according to n ÖNORM EN ISO 1461
- Cleaning opening (from 300 litres)
- Ready for installation, flushed
- Austrian quality product
- Damping of pressure surges in networks
- Maintenance of a constant line pressure
- CE certificate no. CE 0036
